Education

- **University of California, Berkeley** **2017 – 2021**
B.A. Data Science, B.A. Political Economy **GPA: 3.24**

Experience

Merkle Labs

Founder and CEO

Remote

Oct 2025 – Present

- Founded and led a blockchain infrastructure firm specializing in validator operations and distributed systems.
- Designed and automated multi-chain validator deployments and wrote comprehensive NodeOps runbooks.
- Led team of three engineers delivering enterprise-grade validator infrastructure for clients

InfStones

Ecosystem Solutions Architect

Remote

Mar 2025 – Present

- Operated a 100+ GPUs Zero-Knowledge prover with low latency fulfillment across geographic regions.
- Deployed L1/L2 validators across various chains; authored comprehensive incident response runbooks.
- Engineered observability pipelines (Prometheus, Grafana, Loki) for real-time telemetry, peer health monitoring, block production latency, and slashing-risk detection, improving uptime and reducing response time.
- Implemented hardened production environments with bastion-only access, key isolation, automated failover, zero-downtime migrations, and incident response playbooks aligned with SRE best practices.

py-de

Co-Founder & Technical Lead

Los Angeles, CA

Nov 2023 – March 2025

- Designed and developed a web-based Python IDE enabling one-click transition from local to cloud compute through a browser-based SSH terminal powered by Golang's concurrency mechanisms and WebSockets.
- Pitched MVP to VC's and applied to Y Combinator, put idea on hold after exhausting capital runway

Flexport

Software Engineer | Identity & Access Management

San Francisco, CA

Nov 2022 – Nov 2023

- Replaced existing Ruby on Rails based Login and Signup framework with new OAuth 2.0 compliant Java microservices, migrating over 200,000 users and onboarding developers for using the new APIs.
- Integrated multi-billion dollar acquisitions, Deliverr and Shopify Logistics, with the new services for a unified OAuth experience across developer teams, leading to \$250,000 savings from our external OAuth vendor.
- Authored comprehensive technical documentation and security review for the new IAM APIs and regularly performed on-call duties using telemetry frameworks like Grafana, Datadog, and Sumologic.

Fin3 Technologies

Software Engineer | Full Stack

New York, NY

January 2022 – November 2022

- Built containerized AWS-based Java applications using Docker and Kubernetes for tokenized assets
- Designed and deployed a Bitcoin hashrate monitoring system for bankers, and provided additional network statistics such as difficulty, metrics, network fees, and other key metrics with Coin Metrics' API.
